SMEs

Amid the rise of digital transformation in recent years and the impact of the epidemic, more SMEs begin to digitalise their working and business models, which also means that there is a pressing need for them to enhance cyber security.

Facing the cyber threats in the era of digital transformation, organisations should strengthen security risk management. Cyber security scoring is a brand-new tool for evaluating security risks, which can quantify the cyber risks and evaluate the security level of an organisation continuously. It can assist management to easily oversee the organisation's security performance and weaknesses through the security scores in order to identify areas for improvement on IT Security. At the same time, for the SMEs that lack of cyber security talents, security scoring can complement traditional risk assessment, and provide reliable recommendations to assist technicians to quickly fix the vulnerabilities.

Want to know your cyber security score? Let's join this webinar NOW! We will offer you a **FREE SecurityScorecard Summary Report**, which includes overall security score of 10 key factors for your organisation.

Objectives

From this webinar, the participants will learn the following:

- An overview of cyber threat outlook
- How security scoring helps to mitigate or even prevent potential cyber risks
- The SecurityScorecard LITE Service for SMEs
